

Sludge Control

PR MaxiDry Muck Stiffener

PR PROJECT RENTALS

Sales and Rental Solutions

PR MaxiDry powder is a muck stiffener for aqueous liquids and self levelling silts and sludges.

MaxiDry comprises of a finely graded copolymer, designed specifically to dry up geotechnical and environmental liquids, self levelling soils, silts and sludges. This allows the material to be stacked and handled as a full solid rather than a reduced, unmanageable self levelling substance.

As a non-toxic, biodegradable powder MaxiDry

is also safe and easy to handle out in the field, requiring minimal training and expertise.

In addition to the MaxiDry powder, Project Rentals also has a comprehensive range of Water Clarification, Water Filtration and Water Treatment systems available for sale or rental, depending on the application.

Benefits

Ideal for drying aqueous liquids and self levelling silts and sludges

- Rapid and easy clean up of self levelling sludges
- Does not affect pH levels of the sludge
- Non toxic and biodegradable
- Reduces cost in sludge treatment and disposal
- Waste characteristics remain unchanged by using MaxiDry
- Enables tippers and trailers to be fully loaded cleanly
- Enables safe handling and storage of hazardous material
- Can be applied, mixed and handled using conventional earth moving equipment, rather than sludge tankers

Technical Data

Maxidry - Powder

Type	Powder
Size	25kg bag or 1 tonne IBC
Usage	0.1% to 1.0% addition to muck

Aqueous liquid difficult to handle

Pour MaxiDry powder and mix

MaxiDry

Powder

Before

After

Liquid converts to a solid for easy handling
